

MODULE 4

CSS Layouts with Flexbox

Modern Layout

- Flex box (a W3C Candidate Recommendation as of October 2017)
 - Providing a more efficient way to lay out, align and distribute space among items in a container
 - A flex container expands items to fill available free space, or shrinks them to prevent overflow

justify-content

flex-start

space-between

flex-end

space-around

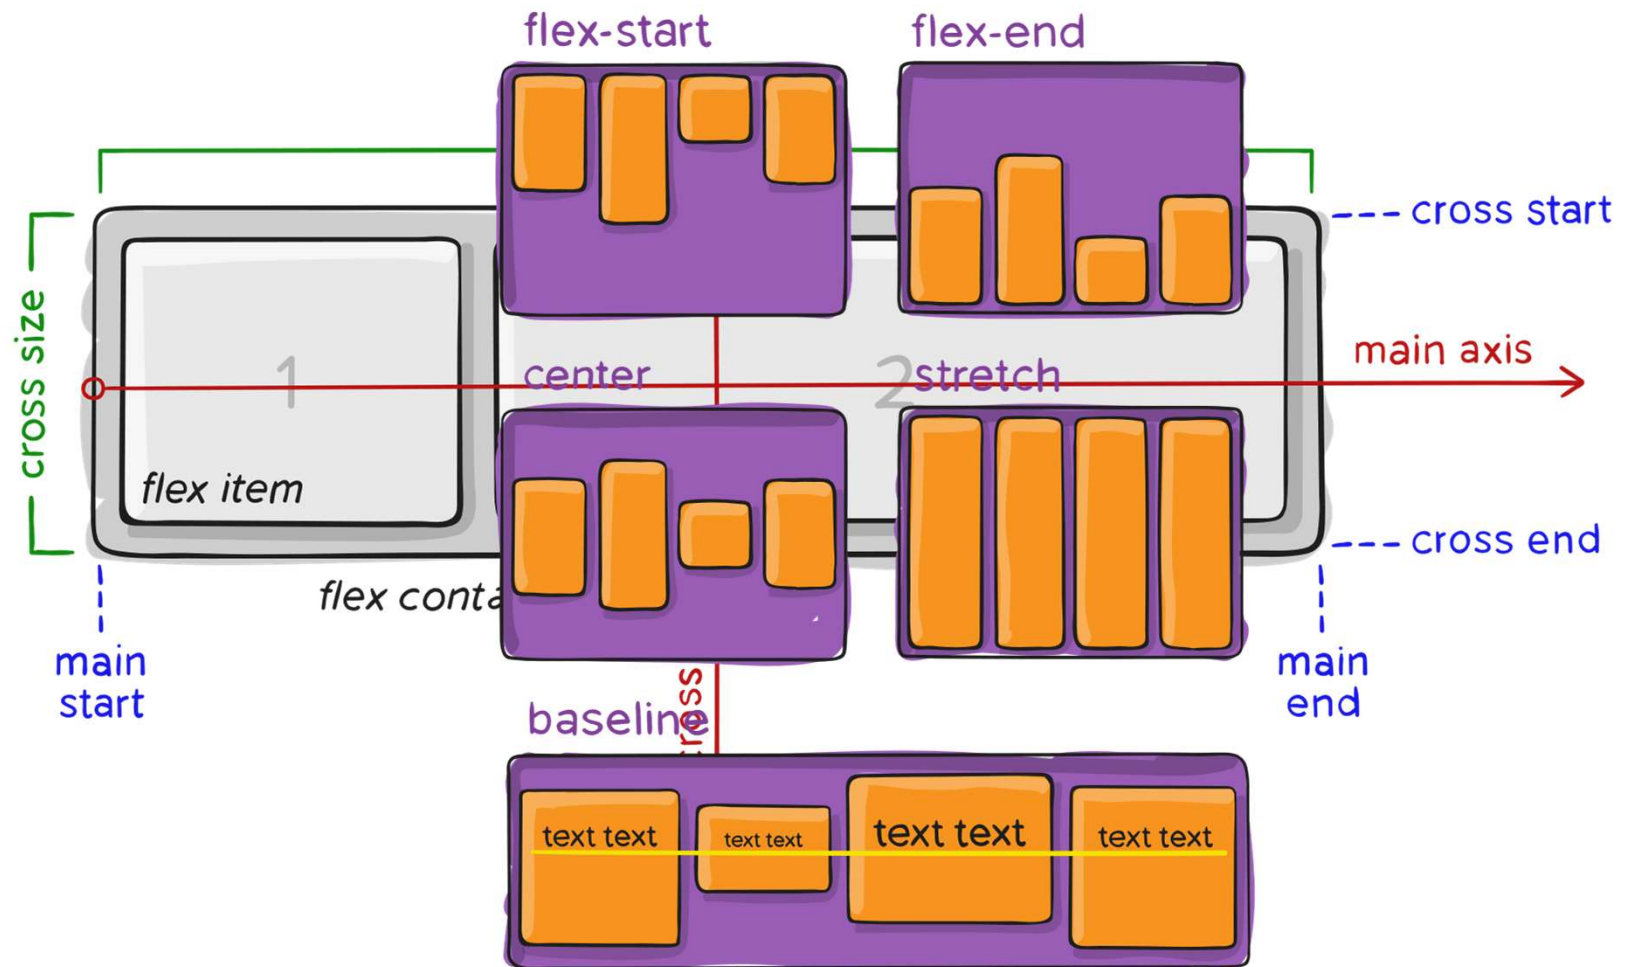

center

space-evenly

align-items

flex-wrap

- nowrap (default): all flex items will be on one line
- wrap: flex items will wrap onto multiple lines, from top to bottom.
- wrap-reverse: flex items will wrap onto multiple lines from bottom to top.
